

## **Styrofoam Apples**

**I think I've discovered the secret of working with Styrofoam balls. The size of the Styrofoam should be consistent with the size of the child. The younger the kid, the smaller Styrofoam surface you should choose. These small Styrofoam balls can easily be turned into apples or pomegranates for this holiday season!**

### Materials:

Small Styrofoam balls

Red and green plastic pushpins (you want to be looking for pushpins that are entirely made up of plastic)

### Directions:

1. Place pins all around the Styrofoam ball.
2. Add three or four green pins to the top for the stem of the apple.

### Variation:

Green pushpins for green apples!

Yellow and black pushpins for a bee!
